

## Defense ID System

### The **DEFENSE ID** System:

Every day security personnel have to make **split second decisions** as to the **identity** of persons seeking access to their facilities.

With **only moments** to visually examine an ID card, how is it possible for a guard to determine

- whether the card is valid ID for entry
- whether the person has officially been barred?
- whether the card was reported as lost or stolen?
- whether the individual has outstanding wants or warrants?

Defense ID validates ID cards instantly on-site.

Using the Defense ID System, rugged handheld, mobile devices **read barcodes, magnetic stripes, RFID and OCR codes** printed on current forms of ID cards.

By scanning and **comparing the information** to over 140 databases, Defense ID can **immediately**

- determine if the ID is **fake**.
- determine if the ID is reported **lost or stolen**.
- determine if the individual has **outstanding wants and warrants**
- determine if the individual is on an **authorized roster** of previously cleared personnel.

Defense ID also has **photo capture** capability, **incident recording** and a **manual search** option.

#### m2100 Agent Handheld

The m2100 Agent Handheld is a trim line, handheld device that fits easily in a pocket or attaches to a belt. The m2100 Agent Handheld is recommended for any use that requires high mobility and easy concealment.

#### m2300 Multipurpose Handheld

The m2300 Multipurpose Handheld is a cell phone device that interfaces with the Defense ID System. The m2300 Multipurpose Handheld has a greater range capability and works wherever there is cell phone coverage.

#### m2500 Sentry Handheld

The m2500 Sentry Handheld is a mobile, ruggedized, handheld device that interfaces with the Defense ID System. The m2500 Sentry Handheld is recommended for entry control points and other heavy use area.

#### m3000 Visitor Center

The m3000 Visitor Center provides a more efficient process to issue a pass by using existing forms of ID to auto fill registration. Works with various common forms of ID such as driver's licenses, Military and Government ID's or passports.

#### Training, Installation & Support

The Defense ID System has a full range of services including 3 year extended warranties on hardware, database subscription services, site surveys, installation, training and support.
