

INTELLI-CHECK ✓ MOBILISA™

Data Capture Modules are small, easy-to-use peripherals that run patented Intelli-Check✓Mobilisa software to quickly and reliably read, analyze and process the encoded information on Driver Licenses and other Government-issued ID cards.

The information is broken into appropriate segments such as Name, Date of Birth, and ID number.

The intelligent use of the information is easily transferred to other identity-related applications such as: travel, rental car, medical, retail, hospitality, law enforcement, access control and many more.

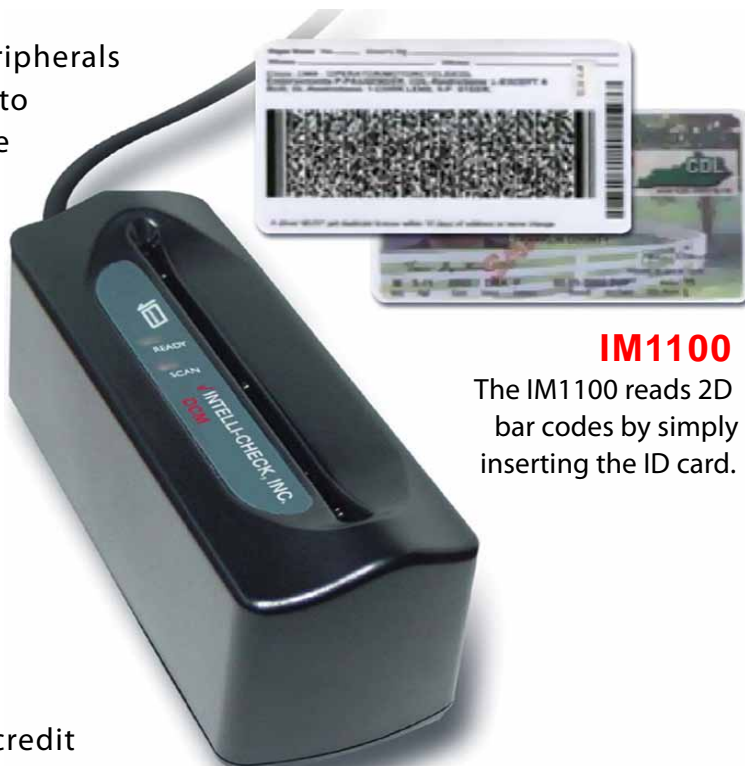

Data Control Modules attach to a PC, laptop, PDA, credit card or Point Of Sale terminal via a standard RS232 port.

To use, simply insert the ID card to read the 2D bar code, or swipe to read the magstripe.

The small footprint works especially well in areas with space constraints.

The IM1100 reads 2D bar codes.

The IM1200 reads both 2D bar codes and magstripes.

IM1100

The IM1100 reads 2D bar codes by simply inserting the ID card.

IM1200

The IM1200 reads both 2D bar codes and magnetic stripes.
